Week 6 Practice Artifacts — Fillable

Markets and Customers: Human Marketer vs AI Marketer · OpenStax Ch. 11.1–11.5, 12.1–12.4 · Artifact: human-only versus AI-supported marketing comparison

Student name	Group	Company A	Company B
Kenzhebay Ayaulym	DPA-2602	Shell	KazMunayGas

Use this document if Miro is unavailable or lagging, or to tidy your work after class. It is the same content as the Student Workbook, step by step, plus a Weekly Record 6 planner (Miro is not needed). Your plans and comparison are the Application evidence for Weekly Record 6; your verification log is the evidence for field 3.

HOW TO WORK IN THIS DOCUMENT (if Miro is slow)

1. **One copy per group.** One student downloads this file from Moodle and uploads it to your group chat in MS Teams (Files). Everyone opens it with "Open in browser" and types at the same time — just like Miro.
2. **Rename the file:** GROUP_CompanyB_Week6_Artifacts.docx.
3. **Type in the empty white cells.** Cells grow as you type. Click a box ☐ to tick it.
4. **AI-use levels:** Segment A (Steps 1–5) is Level 1: no AI. Segment B (Steps 6–11) is Level 3: AI required and declared.
5. **After class:** each student pastes the finished tables into Weekly Record 6, field 2, and the verification log into field 3. You do not need to copy it into Miro later.

Slide map: where each step comes from in BA_Week6_Practice_Session.pptx

Step	Slide(s)	Miro frame	Minutes
1–5 Human-only plan	9–13 (method 9–11, activity 12)	W6-1	20 (Segment A)
6–7 AI-supported plan	15	W6-2	13
8 Verification log	16	W6-2	7
9 Comparison matrix	17	W6-3	3
10 Ethics and Kazakhstan	8, 18	W6-3	3
11 Company A transfer	19	W6-4	12
Weekly Record 6 + checklist	20–21	none	8 + 2

Segment A — Human-only plan (AI-use Level 1) · Slides 10–13

Step 1 to 5. No AI tools. Textbook, notes and Company B evidence allowed. 20 minutes.

Step 1 · Slide 12: choose ONE Company B product or service

Item	Your answer
Product or service	Wholesale and retail sales of Euro-5 diesel fuel and AI-92 gasoline.
Who buys it today	Agricultural enterprises, Kazakhstan Temir Zholy (KTZ) rail fleets, municipal bus fleets, and retail drivers
Evidence source (website, social media, reviews, observation)	JSC NC 'KazMunayGas', Annual Report 2025: Downstream and Refining Operations, Astana, Kazakhstan, Apr. 2026. (p. 112 in report, p.58 in pdf) ar_en_annual-report_pages_kmg_2025.pdf

Step 2 · Slide 12: segment and advantage

Item	Your answer
Segmentation form 1	Geographic and volume
Segmentation form 2	Demographic or benefit
Target customer in one sentence	Commercial logistics operators and private vehicle owners in Kazakhstan seeking guaranteed Euro-5 fuel under state price caps
Competitive advantage (cost, product, service, niche) and why	Cost and Service Differentiation derived from owning domestic refining assets

Step 3 · Slides 6, 12: the five Ps

One decision per P, with a reason. Name the life-cycle stage and one pricing strategy.

P	Decision	Reason
Product	Euro-5 compliant diesel with depressant-dispersant additives for winter.	Prevents fuel gelling down to -30°C in northern KZ regions; matches environmental standards.
Price	Leader pricing under Ministry of Energy RK state price cap orders.	Order No. 171 regulates domestic fuel caps, preserving affordability and curbing inflation.
Place	Direct refinery rail loading terminals + 300+ retail gas station network.	Ensures primary transport corridors and agricultural hubs receive priority fuel supply.
Promotion	Direct B2B long-term contracts, digital fuel cards, national energy messaging.	Secures guaranteed B2B off-take while reinforcing KMG's sovereign brand trust.
People	Certified rail loading operators & station staff trained under TUMAR AI safety.	Guarantees zero-harm industrial safety and professional bilingual customer service.

Item	Your answer
Life-cycle stage of the product, with reason	Maturity. The petroleum products market is mature, requiring high operational efficiency and customer retention.
Pricing strategy (skimming, penetration, leader, bundling, odd-even, prestige)	Penetration / Leader bundling in the context of government price regulation.

Step 4 · Slides 7, 12: customer journey

Five stages of the buying process. Cultural, social, individual and psychological factors affect every step.

Stage	Customer thinks or does	Real touchpoint	Helping P	Pain point
1 Need recognition	The fleet manager is planning to purchase diesel before sowing/harvesting.	B2B portal / Regional sales department	Product	Fear of fuel freezing in winter or a shortage in the region.
2 Information search	Compares tariffs, volume discounts, and filing schedules.	KMG B2B web portal and tender platforms	Price	Non-transparent quotes or delays from private intermediaries
3 Evaluation of alternatives	Verifies the Euro-5 quality certificates and payment deferral terms.	Quality certificates from refinery laboratories	Place	Requirements: 100 % prepayment or distance to loading ramps.
4 Purchase decision	Signs an annual contract or scans a smart card at the overpass.	B2B portal / RFID card	People	Queues and delays in processing at railway overpasses.

Stage	Customer thinks or does	Real touchpoint	Helping P	Pain point
5 Post-purchase behaviour	It analyzes fuel consumption via GPS and requests reconciliation statements.	KMG B2B mobile app	Promotion	Discrepancies between meter data and invoices.

Step 5 · Slide 12: message

Item	Your answer
Three lines in the brand's voice	"Powering Kazakhstan's progress with guaranteed Euro-5 quality. Reliable energy for every journey and every industry, delivered with sovereign pride."
One line in Kazakh or Russian (optional)	«Қазақстан жолдарына арналған сенімді отын - сапа мен тұрақтылық кепілі» «Надежное топливо для дорог Казахстана - гарантия качества и стабильности»

Segment B — AI-supported plan (AI-use Level 3) · Slides 14–21

Step 6 to 11. Declare the AI tool. You are assessed on judgment, verification and accountability, not on clever prompts.

Step 6 · Slide 15: prompt log

Pattern: Role, Context, Task, Constraints, Format. Keep the raw AI answer.

#	Prompt (copy exactly)	AI tool
1	"Act as a senior oil & gas marketing analyst for KazMunayGas (KMG). Target customers: commercial B2B fleets and retail drivers in Kazakhstan. Using the 5 Ps and 5 buying stages, propose a marketing strategy for Euro-5 fuel. Constraints: Kazakhstan domestic market, state-regulated price environment, Kazakh/Russian bilingual context, no fabricated statistics. Format: structured summary table."	Gemini 2.5 Pro
2		
3		

Step 7 · Slide 15: what the AI proposed (summary)

Output	AI proposal in short
Segment and advantage	Focuses on tech-savvy urban drivers and automated B2B fleets, promising high-speed digital fueling and dynamic pricing efficiency.
Five Ps	**Product:** Euro-5 fuel with app-linked telemetry. **Price:** Dynamic surge pricing during peak hours. **Place:** App-based e-commerce pre-ordering. **Promotion:** Digital-only ads and an English-only AI chatbot. **People:** Fully automated self-service pumps without staff interaction.
Customer journey	A 5-stage digital loop: Social media ad → App price lookup → E-commerce prepay → QR scan at pump → Automated digital receipt.
Message	"Next-Generation Digital Energy: Smart, Seamless, and Dynamic Fueling for Modern Drivers."

Step 8 · Slide 16: verification log

Checks: Facts, Theory, Local, Brand, Ethics. Verdict: KEEP, FIX or DROP. No source = DROP or label "estimate".

AI statement	Check	Evidence or source	Verdict
Implement dynamic surge pricing on Euro-5 fuels during peak hours.	Facts and Local	Order of the Minister of Energy of RK No. 171 on state-regulated fuel prices.	☐ Keep ☐ Fix ☒ Drop
Integrate B2B IoT API telemetry into the customer portal for real-time fleet fuel monitoring.	Theory and Brand	KMG Digital Transformation Roadmap 2025-2027 & ABAI Platform brief	☒ Keep ☐ Fix ☐ Drop
Deploy an English-only AI customer support chatbot for B2C drivers.	Local and Ethics	Law of RK No. 274-IV "On Consumer Rights Protection" (Art. 24).	☐ Keep ☒ Fix ☐ Drop
Transition 100% of fuel sales exclusively to app-based e-commerce pre-ordering.	Facts and Local	Physical reality of refinery loading racks (ANPZ/PNHZ) and retail network.	☐ Keep ☐ Fix ☒ Drop
Introduce a Telegram-based loyalty stamp card for B2C retail customers.	Theory and Brand	Qazaq Oil / KMG Retail marketing practices	☒ Keep ☐ Fix ☐ Drop
Claim 99.9% carbon-neutral fuel delivery across all domestic routes.	Facts and Ethics	KMG 2025 Annual Report (Scope 1 & 2 emissions data, p. 112).	☐ Keep ☐ Fix ☒ Drop

Step 9 · Slide 17: compare the two plans

Score 0 absent, 1 weak, 2 adequate, 3 strong, 4 excellent. One line of evidence per score.

Criterion	Human 0–4	AI 0–4	Evidence
Theory fit	4	3	Human plan strictly separates B2B bulk supply and B2C retail 5P frameworks, AI blended wholesale and retail channels together.
Insight	3	2	Human plan incorporates seasonal winter diesel additive requirements (−30°C), AI generated generic, non-regional marketing advice.
Accuracy	4	1	Human plan grounds pricing in state regulations, AI hallucinated illegal dynamic surge pricing during peak hours.
Brand consistency	4	3	Human plan reflects KMG's sovereign mandate and social responsibilities; AI drafted generic corporate marketing copy.
Ethics	4	3	Human plan ensures compliance with RK antitrust and consumer laws, AI ignored local regulatory frameworks.
Kazakhstan context	4	1	Human plan enforces bilingual Kazakh/Russian interfaces and RK data residency; AI assumed US/EU e-commerce norms.
Total (max 24)	23	13	Human plan significantly outperforms AI due to legal accuracy and Kazakhstan market fit.

Question	Our answer
Where did AI help most?	Rapidly generated ideas for B2B fleet IoT API telemetry integration and app-based loyalty features.
Where did AI mislead or miss?	Completely failed regulatory and legal compliance by proposing illegal dynamic surge pricing and ignoring RK bilingual language mandates.
What did the humans add that mattered?	Deep knowledge of Kazakhstan energy laws (Minister of Energy Order No. 171), local logistics realities, and KMG's national social obligations.

Step 10 · Slides 8, 18: ethics and Kazakhstan check

Chapter activity chosen (circle): Working the Net: online retail pricing | Ethics Activity: is multi-level marketing ethical?

Question	Finding	Mitigation or action
Is customer data used without agreement?	B2B fleet telemetry, driver location data, and retail fuel card usage are collected via KMG/Qazaq Oil mobile apps and B2B portals. Unconsented data processing or offshore hosting risks violating privacy rights.	Implement explicit opt-in consent agreements for all app users and B2B clients. Ensure full compliance with RK Law No. 151-IV "On Personal Data and Their Protection" by storing all customer data locally on servers within Kazakhstan.
Does the message stereotype any group?	Generic AI marketing prompts often generate exclusionary slogans that stereotype rural agricultural workers as technologically averse or focus exclusively on affluent urban drivers. In contrast, KMG's actual brand messaging represents Kazakhstan's diverse regional workforce, industrial B2B partners, and retail drivers across all 14 oblasts with equal respect and sovereign dignity.	Audit all promotional content, imagery, and AI-generated copy to ensure balanced, non-stereotypical representations across urban and rural demographics, age groups, and regional industries. Enforce inclusive marketing guidelines that portray regional logistics drivers, agricultural workers, and urban motorists as valued, equal contributors to Kazakhstan's national economy.
Is every claim true and provable? Is AI use disclosed?	Unverified AI marketing proposals (such as AI-suggested claims of "99.9% carbon-neutral fuel delivery") risk greenwashing, deceptive advertising, and loss of public trust.	Disclose AI assistance in marketing development. Verify all environmental and product quality claims against audited KMG Annual Reports and accredited refinery Euro-5 quality passports.
Kazakh, Russian or both: which language fits the segment?	Kazakhstan is a constitutionally bilingual market. Providing digital apps or customer support solely in English or a single language alienates regional customer segments and breaches consumer rights laws.	Enforce equal bilingual functionality across all digital touchpoints (B2B customer portal, Qazaq Oil mobile app, RFID fuel cards, customer support chatbots) in both Kazakh (state language) and Russian (official language) per Art. 24 of RK Law No. 274-IV "On Consumer Rights Protection".
Which platforms and payment habits fit? Which rules apply (check current text)?	Kazakhstan B2C/B2B drivers rely heavily on Kaspi QR, Halyk Pay, Telegram channels, and RFID fuel cards. Retail fuel prices are subject to strict government price caps under RK Ministry of Energy Order No. 171.	Integrate Kaspi QR, Halyk Pay, and KMG RFID fuel cards into all digital checkout gateways. Strictly adhere to state maximum price ceilings under Order No. 171, rejecting any illegal dynamic surge pricing algorithms.
What does the chosen chapter activity tell us about our price or selling honesty?	Ch 11. The *"Working the Net: online retail pricing"* activity highlights that online pricing transparency builds long-term customer trust, while hidden fees or algorithmic price-gouging destroy brand reputation.	Maintain absolute pricing honesty by publishing official, state-regulated fuel pump prices transparently on apps and portals. Use non-fuel convenience merchandise bundling (coffee, food at Qazaq Oil stations) for legal margin growth rather than inflating fuel tariffs.

Step 11 · Slide 19: Company A transfer — adopt, adapt or reject (Weekly Record field 4)

Company A is evidence, not a model to copy. Credit comes from saying what should NOT transfer to Kazakhstan, and why.

Item	Your answer
ONE Company A marketing practice (from its five Ps or journey)	Shell's Premium Fuel Price Skimming & Unhedged Market Price Floating Strategy
Five checks: Facts, Theory, Local, Brand, Ethics (one line each)	**Facts:** Shell generates high retail cash margins by floating fuel prices freely and marketing premium V-Power additives in deregulated Western markets. **Theory:** Price skimming requires an unregulated market with high customer willingness-to-pay; it fails under statutory price controls. **Local:** Kazakhstan fuel prices are subject to strict statutory price caps under RK Ministry of Energy Order No. 171. **Brand:** KMG is Kazakhstan's sovereign energy anchor mandated to ensure national fuel security and economic stability, not short-term margin skimming. **Ethics:** Unhedged market price floating in Kazakhstan would trigger rapid domestic inflation, transport costs spikes, and regional social distress.
Verdict (circle): ADOPT / ADAPT / REJECT, and the reason	**REJECT** **Reason:** Floating retail prices freely violates RK Ministry of Energy Order No. 171 and directly undermines KMG's national mandate to maintain affordable domestic fuel supply across all 14 regions.
One-sentence verdict for Weekly Record 6, field 4	KMG REJECTS Shell's strategy of unhedged market price floating and asset divestment because state fuel price ceilings and KMG's sovereign mandate prioritize affordable domestic fuel security over retail margin skimming.

Weekly Record 6 planner (fields 1–6) · Slide 20

Develops into Capstone section 5b, Marketing and customer. Max 900 words in total.

<table>
<tr><th>Field</th><th>What to write</th><th>Your plan</th></tr>
<tr><td>1 Concept (~150 words)</td><td>Four key terms from Ch. 11–12 in your own words; the framework (five Ps or buying process); the Concept Check.</td><td>Key Terms:
1. Marketing Concept: Identifying customer needs first to deliver value at a profit.
2. Target Market & Segmentation: Dividing the total market into distinct buyer groups based on volume, geography, or benefits.
3. Five Ps: Product, Price, Place, Promotion, and People tailored to the target segment.
4. Customer Buying Process: A 5-stage decision cycle from need recognition to post-purchase evaluation.
Framework: The Five Ps marketing mix applied to KMG's Euro-5 diesel/petrol.
Concept Check: The selling concept focuses on pushing existing factory products through promotion. The marketing concept starts with customer needs. Customer Value is the ratio of benefits to total costs (money, time, effort). Customer Satisfaction is the post-purchase emotional evaluation of whether performance met expectations.</td></tr>
<tr><td>2 Application</td><td>Human-only plan, AI-supported plan, comparison matrix (screenshots).</td><td>
<table>
<tr><th>Criterion</th><th>Human 0–4</th><th>AI 0–4</th><th>Evidence</th></tr>
<tr><td>Theory fit</td><td>4</td><td>3</td><td>Human plan strictly separates B2B bulk supply and B2C retail 5P frameworks, AI blended wholesale and retail channels together.</td></tr>

Field	What to write	Your plan
3 Verification and AI record (~150 words)	Which AI claims you checked, how, what you dropped. Declare tool and level.	Tool & Level: Gemini 2.5 Pro Level 2 Verification Method: All marketing, pricing, and operational claims were checked against Order No. 171 of the Minister of Energy of the Republic of Kazakhstan and KMG's audited 2025 Annual Report (p. 112). AI-generated recommendations were treated as preliminary suggestions, not as verified evidence. Regulatory compliance, factual accuracy, and Kazakhstan's local business context were prioritized during review. Claims Dropped / Fixed: 1. DROPPED: AI's proposal for dynamic peak-hour surge pricing on fuel because it conflicts with the applicable price regulation under Order No. 171. 2. FIXED: AI's English-only customer support bot was redesigned to provide equal support in Kazakh and Russian, reflecting the requirements of RK Law No. 274-IV. 3. DROPPED: AI's claim of "99.9% carbon-neutral fuel delivery" because no reliable evidence supported this environmental claim. 4. FIXED: Recommendations were adapted to KMG's dual responsibility for commercial performance and national energy security, rather than focusing exclusively on profit maximization.
4 Transfer (~150 words)	Company A's marketing practice: Adopt, Adapt or Reject for Company B, with reasons.	**Company A Practice:** Shell's premium fuel price positioning (Shell V-Power) and market-based fuel price flexibility. **Five Checks:** Shell operates in international markets where fuel pricing may be more flexible, allowing premium products to generate higher margins depending on local competition and regulations. However, this practice cannot be transferred directly to Kazakhstan. Domestic fuel pricing is subject to government regulation, including the applicable provisions of RK Ministry of Energy Order No. 171. Introducing unrestricted price floating or premium-based price increases without regulatory approval could conflict with national pricing requirements. Furthermore, KMG has responsibilities beyond commercial profitability, including supporting domestic energy security and maintaining affordable fuel supplies. Any pricing strategy must therefore account for legal compliance, consumer purchasing power, inflation risks, and public expectations. Although Shell's approach may provide useful insights into product positioning and customer segmentation, its pricing mechanisms require substantial adaptation to Kazakhstan's regulated market. **Verdict: REJECT** unrestricted price floating and direct price-skimming practices for Company B (KMG). Consider non-price differentiation only where legally permitted, economically justified, and consistent with domestic energy policy.
